I. STANDARD CONDITIONS

A. Administrative Requirements

The permit holder shall comply with all applicable requirements in the following regulations:

BAAQMD Regulation 1 - General Provisions and Definitions

(as amended by the District Board on 11/15/00);

SIP Regulation 1 - General Provisions and Definitions

(as approved by EPA through 9/29/98);

BAAQMD Regulation 2, Rule 1 - Permits, General Requirements

(as amended by the District Board on 11/15/00);

SIP Regulation 2, Rule 1 - Permits, General Requirements

(as approved by EPA through 1/26/99);

BAAQMD Regulation 2, Rule 2 - Permits, New Source Review

(as amended by the District Board on 10/7/98);

SIP Regulation 2, Rule 2 - Permits, New Source Review and Prevention of Significant Deterioration

(as approved by EPA through 1/26/99);

BAAQMD Regulation 2, Rule 4 - Permits, Emissions Banking

(as amended by the District Board on 10/7/98); and

SIP Regulation 2, Rule 4 - Permits, Emissions Banking

(as approved by EPA through 1/26/99).

BAAQMD Regulation 2, Rule 6 - Permits, Major Facility Review

(as amended by the District Board on 10/20/99).

B. Conditions to Implement Regulation 2, Rule 6, Major Facility Review

1. This Major Facility Review Permit was issued on March 12, 2001 and expires on February 28, 2006. The permit holder shall submit a complete application for renewal of this Major Facility Review Permit no later than August 31, 2005, and no earlier than February 28, 2005. **If a complete application for renewal has not been submitted in accordance with these deadlines, the facility may not operate after February 28, 2006.** (Regulation 2-6-307, 404.2, & 409.6; MOP Volume II, Part 3, §4.2)
2. The permit holder shall comply with all conditions of this permit. The permit consists of this document and all appendices. Any non-compliance with the terms and conditions of this permit will constitute a violation of the law and will be grounds for enforcement action; permit termination, revocation and re-issuance, or modification; or denial of a permit renewal application. (Regulation 2-6-307; MOP Volume II, Part 3, §4.11)
3. In the event any enforcement action is brought as a result of a violation of any term or condition of this permit, the fact that it would have been necessary for the permittee to halt or reduce the permitted activity in order to maintain compliance with such term or condition shall not be a defense to such enforcement action. (MOP Volume II, Part 3, §4.11)

I. Standard Conditions

4. This permit may be modified, revoked, reopened and reissued, or terminated for cause. (Regulation 2-6-307, 409.8, 415; MOP Volume II, Part 3, §4.11)
5. The filing of a request by the facility for a permit modification, revocation and re-issuance, or termination, or of a notification of planned changes or anticipated non-compliance does not stay the applicability of any permit condition. (Regulation 2-6-409.7; MOP Volume II, Part 3, §4.11)
6. This permit does not convey any property rights of any sort, nor any exclusive privilege. (Regulation 2-6-409.7; MOP Volume II, Part 3, §4.11)
7. The permit holder shall supply within 30 days any information that the District requests in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. (Regulation 1-441, Regulation 2-6-409.4 & 501; MOP Volume II, Part 3, §4.11)
8. Any records required to be maintained pursuant to this permit which the permittee considers to contain proprietary or trade secret information shall be prominently designated as such. Copies of any such proprietary or trade secret information which are provided to the District shall be maintained by the District in a locked confidential file, provided, however, that requests from the public for the review of any such information shall be handled in accordance with the District's procedures set forth in Section 11 of the District Administrative Code. (Regulation 2-6-419; MOP Volume II, Part 3, §4.11)
9. Proprietary or trade secret information provided to EPA will be subject to the requirements of 40 CFR Part 2, Subpart B - Public Information, Confidentiality of Business Information. (40 CFR Part 2)
10. The emissions inventory submitted with the application for this Major Facility Review Permit is an estimate of actual emissions for the time period stated and is included only as one means of determining applicable requirements for emission sources. It does not establish, or constitute a basis for establishing, any new emission limitations. (MOP Volume II, Part 3, §4.11)

C. Requirement to Pay Fees

The permit holder shall pay annual fees in accordance with District Regulation 3, including Schedule P. (Regulation 2-6-402 & 409.13, Regulation 3; MOP Volume II, Part 3, §4.12)

D. Inspection and Entry

Access to Facility: The permit holder shall provide reasonable access to the facility and equipment which is subject to this permit to the APCO and/or to his or her designee. (Regulation 1-440, Regulation 2-6-409.3; MOP Volume II, Part 3, §4.14)

E. Records

Notwithstanding the specific wording in any requirement, all records for federally enforceable requirements shall be maintained for at least five years from the date of entry. (Regulation 2-6-501, Regulation 3; MOP Volume II, Part 3, §4.7)

I. Standard Conditions

F. Monitoring Reports

Reports of all required monitoring must be submitted to the District at least once every six months, except where an applicable requirement specifies more frequent reporting. The first reporting period for this permit shall be March 12, 2001 to August 31, 2001. The report shall be submitted by September 30, 2001. Subsequent reports shall be for the following periods: September 1st through February 28th or 29th and March 1st through August 31st and are due on the last day of the month after the end of the reporting period. All instances of non-compliance shall be clearly identified in these reports. The reports shall be certified by the responsible official as true, accurate, and complete. In addition, all instances of non-compliance with the permit shall be reported in writing to the District's Compliance and Enforcement Division within 10 calendar days of the discovery of the incident. Within 30 calendar days of the discovery of any incident of non-compliance, the facility shall submit a written report including the probable cause of non-compliance and any corrective or preventative actions. The reports shall be sent to the following address:

Director of Compliance and Enforcement
Bay Area Air Quality Management District
939 Ellis Street
San Francisco, CA 94109
Attn: Title V Reports

(Regulation 2-6-502, Regulation 3; MOP Volume II, Part 3, §4.7)

G. Compliance Certification

Compliance certifications shall be submitted annually by the responsible official of this facility to the Bay Area Air Quality Management District and to the Environmental Protection Agency. The certification period will be March 1st to February 28th or 29th of each year. The certification shall be submitted by March 31st of each year. The certification must list each applicable requirement, the compliance status, whether compliance was continuous or intermittent, the method used to determine compliance, and any other specific information required by the permit. The permit holder may satisfy this requirement through submittal of District-generated Compliance Certification forms. The certification should be directed to the District's Compliance and Enforcement Division at the address above, and a copy of the certification should be sent to the Environmental Protection Agency at the following address:

Director of the Air Division
USEPA, Region IX
75 Hawthorne Street
San Francisco, CA 94105
Attention: Air-3

(MOP Volume II, Part 3, §4.5 and 4.15)

I. Standard Conditions

H. Emergency Provisions

1. The permit holder may seek relief from enforcement action in the event of a breakdown, as defined by Regulation 1-208 of the District's Rules and Regulations, by following the procedures contained in Regulations 1-431 and 1-432. The District will thereafter determine whether breakdown relief will be granted in accordance with Regulation 1-433. (MOP Volume II, Part 3, §4.8)
2. The permit holder may seek relief from enforcement action for a violation of any of the terms and conditions of this permit caused by conditions beyond the permit holder's reasonable control by applying to the District's Hearing Board for a variance pursuant to Health and Safety Code Section 42350. The Hearing Board will determine after notice and hearing whether variance relief should be granted in accordance with the procedures and standards set forth in Health and Safety Code Section 42350 et seq. Any variance granted by the Hearing Board from any term or condition of this permit which lasts longer than 90 days will be subject to EPA approval. (MOP Volume II, Part 3, §4.8)
3. Notwithstanding the foregoing, the granting by the District of breakdown relief or the issuance by the Hearing Board of a variance will not provide relief from federal enforcement. (MOP Volume II, Part 3, §4.8)

I. Severability

In the event that any provision of this permit is invalidated by a court or tribunal of competent jurisdiction, or by the Administrator of the EPA, all remaining portions of the permit shall remain in full force and effect. (Regulation 2-6-409.5; MOP Volume II, Part 3, §4.10)

III. GENERALLY APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP Rules and Regulations and other federal requirements cited below. These requirements apply in a general manner to the facility and/or to sources exempt from the requirement to obtain a District Permit to Operate. The District has determined that these requirements would not be violated under normal, routine operations, and that no additional periodic monitoring or reporting to demonstrate compliance is warranted. In cases where a requirement, in addition to being generally applicable, is also specifically applicable to one or more sources, the requirement and the source are also included in Section IV, Source-Specific Applicable Requirements, of this permit.

The dates in parenthesis in the Title column identify the versions of the regulations being cited and are, as applicable:

1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board
2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date.

The full language of SIP requirements is included in Appendix A of this permit if the SIP requirement is different from the current BAAQMD requirement.

NOTE:

There are differences between the current BAAQMD rule and the version of the rule in the SIP. For specific information, contact the District's Rule Development Section of the Enforcement Division. All sources must comply with both versions of the rule until US EPA has reviewed and approved (or disapproved) the District's revision of the regulation.

IV. SOURCE-SPECIFIC APPLICABLE REQUIREMENTS

The permit holder shall comply with all applicable requirements, including those specified in the BAAQMD and SIP Rules and Regulations and other federal requirements cited below. The requirements cited in the following tables apply in a specific manner to the indicated source(s).

The dates in parenthesis in the Title column identify the versions of the regulations being cited and are, as applicable:

1. BAAQMD regulation(s): The date(s) of adoption or most recent amendment of the regulation by the District Board
2. Any federal requirement, including a version of a District regulation that has been approved into the SIP: The most recent date of EPA approval of any portion of the rule, encompassing all actions on the rule through that date

The full text of each permit condition cited is included in Section VI, Permit Conditions, of this permit. The full language of SIP requirements is included in Appendix A of this permit if the SIP requirements are different from the current BAAQMD requirements. All other text may be found in the regulations themselves.

V. SCHEDULE OF COMPLIANCE

The permit holder shall comply with all applicable requirements cited in this permit. The permit holder shall also comply with applicable requirements that become effective during the term of this permit on a timely basis.

VI. Permit Conditions

VI. PERMIT CONDITIONS

Any condition that is preceded by an asterisk is not federally enforceable.

Condition # 1253

For S-1 THROUGH S-16, S-18, S-19, STORAGE TANKS; S-20, TANK TRUCK LOADING RACK; S-21, MARINE VESSEL WHARF; S-23, S-24, OILY WATER SEPARATORS; S-27, S-28, FIXED ROOF TANKS; S-73, DIRECT FIRED HEATER:

I. EMISSION LIMITATIONS

- A) Deleted, obsolete
- B) Total facility emissions from all sources, including organic loading emissions, shall not exceed the following levels during any calendar year. (Revised July 1, 1991) [Basis: Cumulative Increase]

Organic Compounds:	65.1 tons/year
Carbon Monoxide:	52.2 tons/year
Oxides of Nitrogen:	129.5 tons/year
Sulfur Dioxide:	83.5 tons/year
Particulate Matter:	25.8 tons/year

II. GENERAL TERMINAL AND WHARF CONDITIONS

- A) No tanker calling exclusively at the Terminal shall, while in California Coastal waters, engage in any maintenance, repair, inspection, washing, purging and gas freeing, or lightering of cargo tanks or any other operation (excepting loading and offloading, ballasting, and bunkering) that result in the escape of hydrocarbon vapor to the atmosphere, except that this does not prohibit emergency repairs. These activities shall be recorded on a District approved log and be made available to the District representative upon request. Any failure by the Permit Holder to report the activities listed above will subject them to appropriate enforcement action. Any emissions resulting from these unauthorized activities will be charged to the Permit Holder emissions cap. [Basis: Cumulative Increase]
- B) Pumps, compressors, pump manifolds and pressure relief valves shall be inspected for visible vapor or liquid leaks on a daily basis. [Basis: Reg. 8-18]
- C) The leak check procedures, testing methods, calibration procedures, definition of a leak, repair techniques, record keeping and report requirements shall be in accordance with the Federal NSPS for equipment leaks of VOC from onshore natural gas processing plants. [Basis: NSPS]

VI. Permit Conditions

III. REPORTING REQUIREMENTS

- A) The followings shall be reported to the District on the quarterly basis: [Basis: Cumulative Increase]
1. The total volume of gasoline throughput at the truck rack.
 2. The total volume of liquids processed through the oil/water separators during the quarter.
 3. For each marine vessel, which called at the Terminal during the quarter, the Permit Holder shall verify the following to the satisfaction of the APCO: the Reid vapor pressure of the previous cargo and previous port of call. For all vessels that the Permit Holder claims were "gas freed" prior to entering California Coastal waters, the Permit Holder shall supply documentation of this claim that is acceptable to the APCO. [Basis: Cumulative Increase]
- B) Once the onshore vapor recovery system including vessel interconnection at the wharf is in operation, the Permit Holder shall report to the District within 15 days after the close of each calendar quarter on the number of vessels that have been loaded at its marine terminal. These reports shall specify the percentage of said vessels which were hooked up to the Permit Holder's onshore vapor recovery system during said quarter. With respect to those vessels into which organic liquids were loaded without being hooked up to said system, these reports shall summarize the reasons given by Permit Holder's customers for their inability to secure vessels built or retrofitted to accommodate hook-up to said system. [Basis: Cumulative Increase]
- C) Records shall be kept to document compliance with the valve, pump, and compressor inspection and maintenance requirements of condition II (C) above. [Basis: NSPS]
- D) All records required to be maintained by Permit Holder under this permit shall be kept for at least 5 years and made available to a District representative upon request. [Basis: Reg. 2-6-501]

SCHEDULE A

ORGANIC COMPOUND EMISSION CALCULATIONS

The sum of the following emission categories shall not exceed 65.1 tons, per calendar year of organic compounds.

VI. Permit Conditions

Cargo Loading Emission + Tanker Transit Emissions + Tanker Hoteling Emissions + Tanker Pumping Emission + Vapor Control Equipment Emission + Ballast Emissions + Tug Combustion Emissions + Tank Standing Losses + Fugitive Emissions + Tank Withdrawal Losses.

All calculations shall be performed in accordance with the procedures specified in Schedule D.
[Basis: Cumulative Increase]

SCHEDULE B

OXIDES OF NITROGEN EMISSIONS CALCULATIONS

The sum of the following emission categories shall not exceed 129.5 tons per calendar year of oxides of nitrogen.

Tug Combustion Emissions + Tanker Hotelling Emissions + Tanker Transit Emissions + Tanker Pumping Emissions.

All calculations shall be performed in accordance with the procedures specified in Schedule D.
[Basis: Cumulative Increase]

SCHEDULE C

SULFUR DIOXIDE EMISSION CALCULATIONS

The sum of the following emission categories shall not exceed 83.5 tons per calendar year of sulfur dioxide.

Tug Combustion Emissions + Tanker Hotelling Emissions + Tanker Transit Emissions + Tanker Pumping Emissions.

All calculations shall be performed in accordance with the procedures specified in Schedule E.
[Basis: Cumulative Increase]

SCHEDULE D

FUGITIVE EMISSION CALCULATIONS

Emission factors from AP-42, with 80% control due to the Inspection and Maintenance program required under condition III (C). [Basis: Cumulative Increase]

VAPOR CONTROL EQUIPMENT/VAPOR RECOVERY SYSTEM EMISSIONS

During operation of the thermal oxidizer its emissions (based on District Source Testing Data) will be assumed to be as follows: [Basis: Cumulative Increase]

NOx: 9.68 lb/day + 0.1744 lb/1,000 barrels of all materials received into tanks attached to the vapor recovery unit.

Organics: 1.44 lb/1,000 barrels of all materials received into tanks attached to the vapor recovery unit.

FURNACE EMISSION CALCULATIONS

Organic Compounds	0.28 lb/1,000 gallons of fuel oil burned
NOx	55.00 lb/1,000 gallons of fuel oil burned
SO2	78.50 lb/1,000 gallons of fuel oil burned

VI. Permit Conditions

TANK STANDING EMISSION CALCULATIONS (Tanks 13-16 only)

Calculate using equation 4 from AP-42 p 4.3-16 (9/85)

Where:

$$L(s) = K(s) \times V_n \times P^* \times D \times M(v) \times K(c)$$

$L(s)$ = standing losses, lb/year of organics

$K(s)$ = seal factor 1.2 for metallic shoe primary seal; 0.2 for rim mounted secondary seal.

V = average wind speed = 13 miles per hour

N = wind speed exponent = 1.5 for metallic shoe seal

P^* = vapor pressure function

Note:

P for crude oils will be determined by monthly composite samples.

P for FCC feedstock, all gas oils and fuel oils = 0 for purpose of this calculation.

PA = atmospheric pressure = 14.7 psia

D = tank diameter = 237 feet

$M(v)$ = molecular weight of vapor, 58 for gasoline and crude oil, 190 for No. 6 and all other products

$K(c)$ = product factor = 0.4 for crude oil; = 1.0 for all other materials

TANK WITHDRAWAL EMISSION CALCULATIONS

Calculate using equation 5 from AP-42 d 4-3-16 (9/85):

$$L(w) = 0.943 \text{ QCW}/D$$

where:

$L(w)$ = withdrawal losses = lb/yr of organics

Q = throughput, bbl/year

C = shell clingage factors = 0.006

W = liquid density, lb/gal

Use:

8.2 for San Joaquin Valley Crude Oil and

7.8 for all other products if unknown

D = tank diameter = 237 feet

CARGO LOADING EMISSION CALCULATIONS

A) UNCONTROLLED LOADING

VI. Permit Conditions

Crude Oil Cargos

The three following procedures are taken from API Publication 2514A Second Edition, September 1981 and are described on pp 1-3 of that document as "Correlations for Estimating Emissions from Loading and Ballasting of Crude Oil Tankers".

1. Cargos with no vapor pressure data available:

If information on the prior cargo and compartment status during ballast voyage as well as volatility of the crude of which Permit Holder loaded is unknown, the following emission factors shall be used.

All vessels: 1.0 pounds of VOC per 1,000 gallons of liquid transferred.

2. For crude oil cargos with vapor pressure greater than 1.5 psia:
 - a) When the prior cargo or arrival condition of the vessel is unknown and the volatility of the crude oil, which Permit Holder loaded is known, an arrival emission factor, E_a , of .86 lb/1,000 gallon loaded will be used. Generated emission shall be calculated as:

$$E_g = 1.84 \times (0.44 \times (TVP) - 0.42) \times M \times G / T$$

where:

E_g = generated emission, lb/1,000 gallon

TVP= true vapor pressure of loaded crude oil, psia

M = molecular weight of vapor, use 58 lb/lb-mole

G = vapor growth factor, use 1.02

T = loading temperature, Rankine

Total emission shall be calculated as:

$$E_t = E_a + E_g$$

where:

E_t = total loading emission, lb/1,000 gallon

E_a = arrival component

E_g = generated component

- b) If adequate information is available about a specific previous cargo the following calculation procedures shall be used. These procedures require a characterization of the previous cargo as either "volatile" or "non-volatile" at loading conditions. "Volatile" has been defined as having a true vapor pressure at loading conditions in excess of 1.5 psia. Any crude stream which has flash point in excess of 130F or initial boiling point excess of 302F shall be deemed to be "non-volatile" at loading conditions. The Permit Holder shall be

VI. Permit Conditions

permitted to determine that crude oils not meeting this test are "non-volatile" by any of the three procedures described below:

- i. The ship owner or charterer may inform the Permit Holder in writing of the true vapor pressure at loading conditions, that the true vapor pressure did not exceed 1.5 psia, or of the Reid Vapor Pressure and loading temperature; or
- ii. The vessel owner, charterer or prior load terminal operator may inform the Permit Holder of the identity of the crude stream in the prior load. The crude stream may be characterized by reference to typical samples of assays of such streams along with the prior loading temperature to determine the true vapor pressure; or
- iii. The ship owner, charterer, or terminal operator for the prior load may provide assay data or samples to determine Reid Vapor Pressure. Data for loading conditions from a knowledgeable source shall be used to determine true vapor pressure at loading conditions.

Emissions from loading shall be calculated as:

$$E_t = E_a + E_g$$

where:

E_t = total loading emission, lb/1,000 gallon

E_a = arrival component

E_g = generated component

Arrival Emission Factor, lb/1000 gallon

<u>Previous Cargo</u>	<u>Condition of Compartment</u>	<u>Arrival Emission factor</u>
Non-Volatile	Any	0.33
Volatile	Washed or Gas Freed	0.33
Volatile	Ballasted	0.46
Volatile	Uncleaned	0.86

If the prior cargo is unknown, it shall be assumed to be volatile. If the condition of the compartment is unknown, it shall be assumed to be uncleaned.

$$E_g = 1.84 \times (0.44 \times (TVP) - 0.42) \times MxG/T$$

where:

E_g = generated emission, lb/1,000 gallon

TVP= true vapor pressure of loaded crude oil, psia

VI. Permit Conditions

M = molecular weight of vapor, use 58 lb/lb-mole

G = vapor growth factor, use 1.02

T = loading temperature, Rankine

- For crude oil Cargos with true vapor pressure less than 1.5 psia, emissions from loading non-volatile crude oils shall be calculated as:

$$E_t = E_a + E_g$$

where:

E_t = Total loading emission, lb/1,000 gallon

E_a = Arrival Emission

E_g = Generated Emissions

$E_a = 12,46 \text{ SPaM/T}$

$E_g = 12,46 \text{ SPgM/T}$

Where:

S = 0.2 for ships and ocean barges 0.5 for barges

P_a = True vapor pressure of prior cargo, psia = zero if tank has been water washed or gas freed = 0.75 psia if no data available.

P_g = true vapor pressure of crude oil loaded, psia

M = molecular weight or vapors, use 58 lb/lb-mole

T = loading temperature, Rankine

Gasoline Cargos

- If information on the vessels' prior cargo and ballast voyage treatment is unknown the following emission factors shall be used.

	Total Loading Emission lb/1,000 gallon
Gasoline - Tanker/Ocean Barges	2.6
Gasoline – Barges	3.9

Note: Ocean barges are assumed to have a capacity greater than 100,000 bbls.

- If adequate information is available, the following loading factors shall be used:

Total Loading Emissions (lbs VOC/1,000 bbl loaded)				
Type	Condition	<u>minimum</u> <u>ullage</u>	<u>minimum</u> <u>ullage</u>	<u>minimum</u> <u>ullage</u>

VI. Permit Conditions

<u>of</u> <u>Vessel</u>	<u>Prior</u> <u>Cargo</u>	<u>of</u> <u>Compartment</u>	<u>less than</u> <u>10ft</u>	<u>between</u> <u>10&20ft</u>	<u>more</u> <u>than 20ft</u>
Tanker/Ocean					
Barge	Volatile	Uncleaned	109.2	94.5	79.8
		Ballasted	71.4	56.7	42.0
		Cleaned (washed)	63.0	48.3	33.6
		Gas Freed	29.4	4.7	0.0
	Non-Volatile	All	29.4	14.7	0.0

Barge less than 100,000 barrels capacity

Volatile	Uncleaned	163.8	163.8	163.8
	Ballasted	84.0	84.0	84.0
	Cleaned (washed)	84.0	84.0	84.0
	Gas Freed	84.0	84.0	84.0
Non-Volatile	All	84.0	84.0	84.0

Volatile liquid is any hydrocarbon liquid with a true vapor pressure greater than 1.5 psia.

An Uncleaned compartment has had no treatment of any kind except routine heel washing.

A Ballasted compartment is an uncleaned cargo compartment that has been loaded with ballast water.

A cleaned compartment has been water washed.

A gas-freed compartment has been cleaned and airblown, such that the compartment is suitable for entry and hot work (such as welding).

Distillate Fuels

1. If adequate information on the vessel's prior cargo and ballast voyage treatment is available, the following emission factors shall be used to calculate emissions from loading diesel fuel and kerosene based jet fuels:

Total Loading Emissions
(lbs VOC/1,000 bbl loaded)

<u>Type of</u> <u>Vessel</u>	<u>Prior</u> <u>Cargo</u>	<u>Condition of</u> <u>Compartment</u>	<u>Emission</u> <u>Factor</u>
---------------------------------	------------------------------	---	----------------------------------

VI. Permit Conditions

Tanker/Ocean			
Barge	Volatile	Uncleaned	79.8
		Ballasted	42.0
		Cleaned (washed)	33.6
		Gas Freed	0.0
	Non-Volatile	All	0.0

Barge less than 100,000 barrels capacity

	Volatile	Uncleaned	163.8
		Ballasted	84.0
		Cleaned (washed)	84.0
		Gas Freed	0.0
	Non-Volatile	All	0.0

Volatile liquid is any hydrocarbon liquid with a true vapor pressure greater than 1.5 psia.

Definitions for compartment condition are the same as set forth above under gasoline cargos.

2. If any of the information necessary to ascertain the prior cargo or compartment condition of the vessels being loaded is unknown, the applicable worst case assumption from the table above shall be used.

Other Volatile Cargos

Volatile organic compounds, other than gasoline or volatile crude oil, may be loaded at the Martinez Shore Oil terminal. Emissions from loading those materials shall be calculated as follows:

$$Et = 12.47 \text{ SPM/T}$$

where:

Et = Total loading emission, lb/1,000 gallon loaded

S = 0.2 for ships and ocean barges 0.5 for barges

P = True vapor pressure of prior cargo, psia

M = molecular weight of vapors, use 58 lb/lb-mole

T = loading temperature, Rankine

For naphtha-based jet fuels, P will depend on the type of product (see AP-42, Table 4.3.2,

VI. Permit Conditions

Physical Properties of Typical Organic Liquids)

For other volatile organic liquids, Permit Holder shall obtain the data.

Volatile liquid is any hydrocarbon liquid with a true vapor pressure greater than 1.5 psia.

Fuel Oil and Other Non-Volatile Cargos

Non-volatile organic materials other than non-volatile crude oils and distillate fuels may be loaded at the Permit Holder terminal.

1. If adequate information on the vessel's prior cargo and ballast voyage treatment is available, the following emission factors shall be used to calculate emissions from the loading of fuel oil and other non-volatile cargos:

Total Loading Emissions
 (lbs VOC/1000 bbl loaded)

Prior Cargo:	<u>Crude Oil</u>		Gasoline/ Other Volatile <u>Organics</u>	Diesel/ Kero Jet <u>Fuel</u>	Fuel Oil Other Non- Volatile <u>Organics</u>
	<u>Volatile</u>	<u>Non- Volatile</u>			
Condition of Compartment					
Uncleaned	30.7	11.8	79.8	0	0
Ballasted	16.4	11.8	42.0	0	0
Water Washed	11.8	11.8	33.6	0	0
Gas Freed	0	0	0	0	0

Volatile liquid is any hydrocarbon liquid with a true vapor pressure greater than 1.5 psia.

Definitions for compartment condition are the same as set forth above under gasoline cargos

2. If any of the information necessary to ascertain the prior cargo of compartment condition of the vessels being loaded is unknown, the applicable worst case assumption from the table above shall be used.

B) CONTROLLED LOADING

For all cargos carried on vessels for which vapor emissions during loading are controlled either

VI. Permit Conditions

by connection to the onshore vapor recovery system or by use of onboard vapor processing equipment the emissions after control shall be based on the uncontrolled emissions level modified by a factor representing reduction. Such factors shall be determined by source tests, approved by the APCO, and shall reflect operating characteristics of the actual vapor control equipment.

$$a + BEt$$

where:

a = a constant independent of the cargo loaded or uncontrolled loading emissions.

b = a constant

Et = uncontrolled level of loading emissions

SCHEDULE E

Sulfur emissions will be based on the actual sulfur content fuels burned where possible. Permit Holder shall have three alternative procedures available for establishing the sulfur content of fuels. First, Permit Holder may provide fuel of known sulfur content to the ship. Second Permit Holder may sample the ship's fuel for analysis by an outside laboratory qualified to perform Sulfur analyses on marine fuels. Third, in the absence of either of the two procedures mentioned above, assumed values below shall be used.

If Permit Holder elects to provide low sulfur fuel to a particular ship, a certified fuel analysis of the Sulfur content shall be used to establish SO₂ emissions. The Permit Holder terminal manager shall instruct the ship's captain or his designated to burn only that fuel while within the District waters. The amount of fuel provided shall be adequate to fuel all the ship's requirements for hotelling, pumping and transit. A sample of the fuel provided shall be retained by Permit Holder for District analysis until at least 90 days following delivery of the quarterly report including that particular ship call. Records of the quantity of fuel provided, sulfur content, and burning instructions shall be retained by Permit for at least five year following the ship call.

If Permit Holder elects to sample the fuel from a particular ship, such sample shall be gathered

VI. Permit Conditions

by the ship's personnel and delivered to permit Holder. This sample shall contain at least one-quart volume. After analysis the remaining portion of the samples shall be retained at the terminal and made available to the district for their independent analysis. All such samples shall be retained for at least 90 days following delivery of the quarterly report to the District. Samples for a calendar quarter may be combined by blending thoroughly equal parts of each sample gathered for each type of ship, that is one composite sample for steam ships and one composite sample for motor and other ships. At Permit Holder's option, each ship sample may be analyzed separately. An independent laboratory shall analyze such samples and the results of those analyses shall be used to establish sulfur emissions. Permit Holder shall report to the District results of all analyses performed. Any failure by Permit Holder to report the sulfur analyses will subject them to an appropriate enforcement action.

If Permit Holder neither samples the fuel from any given ship, nor provides fuel to the ship, the sulfur content of that fuel shall be assumed to be 3.34% in the case of steam ships, or 1.5% in the case of motor ships and other ships. In the event that Permit Holder samples and cause to be analyzed fuels from at least 66.67% of all ships calling at terminal in a calendar year to which fuel was not provided, the weighted average of sample results may be used in the following calendar year in lieu of the assumed sulfur values described in the preceding paragraph. In calculating the weighted average, each analysis shall be weighted by the number of ships represented by that analysis, i.e., one if the sample was an individual ship sample or more than one if the sample was composite sample. The results of such analyses are subject to verification by the District and samples shall be available upon demand for that purpose. If Permit Holder samples and reports fewer than 66.67% of all ships to which fuel was not provided in a given calendar year, the assumptions for the following year shall be 3.34% for steam ships and 1.5% for motor and other ships. [Basis: Reg. 9-1-303]

CARGO PUMPING EMISSION CALCULATIONS

Sulfur oxide emissions for offloading cargos from marine vessels to shore tanks shall be calculated as follows:

$$\text{Emissions} = \frac{\text{fuel sulfur index}}{3.34} \times \frac{315 \text{ lb SO}_2}{\text{M gal fuel}} \times \frac{32 \text{ lb S}}{64 \text{ lb SO}_2}$$

HOTELLING EMISSION CALCULATIONS

Barges have no hotelling emissions.

Hotelling emissions will be calculated for ship as follows:

Emissions = R-factor x Hotelling time (hours) x R-Fuel

Sulfur Index + D-factor x Hotelling time x

D-Fuel Sulfur Index

Hotelling time = Hours from time the vessel is secure at the wharf until the time the last line is cast off.

Factors are as follows:

IV MARINE VESSEL LOADING VAPOR COMBUSTION UNIT (A-41)

1. Deleted, startup source test.
2. Permit Holder shall perform necessary source tests to establish a specific range of combustion zone temperatures which will ensure that the emissions of precursor organic compounds are reduced at least 95% by weight from uncontrolled conditions, or that the POC emissions do not exceed 2 lbs per 1000 barrels loaded. [Basis: Cumulative Increase]
3. Permit Holder shall install instrumentation to monitor and record the following: [Basis: Cumulative Increase]

VI. Permit Conditions

- a. Static pressure developed in the marine tank vessel,
- b. Oxidizer exhaust temperature, and
- c. Hydrocarbon concentration and flow rate to determine mass emissions, or
 - i. A concentration measurement alone if Permit Holder can demonstrate to the satisfaction of the APCO that concentration alone provides adequate assurance of compliance, or
 - ii. Any other method or device that adequately verifies compliance, with prior approval from the APCO.

The need for the hydrocarbon analyzer will be reviewed by the APCO prior to issuance of the initial permit to operate.

4. Hydrocarbon emissions charged to the annual marine and facility emission caps will be the emissions recorded by the continuous hydrocarbon monitor. If the monitor is not operating, Permit Holder shall calculate uncontrolled emissions as specified in Schedule D of the Permit Conditions established as part of application number 31329, and use a 95% (by weight) reduction factor to determine controlled emissions. The overall collection and control efficiency, as determined by source test, may be used in lieu of the 95% factor for determining controlled emissions. [Basis: Cumulative Increase]
5. Deleted, startup monitoring plan.
6. Permit Holder shall not load or permit the loading of a regulated organic liquid, as defined in Regulation 8, Rule 44, Section 204, into a marine tank vessel within the District whenever the marine vapor recovery system is not fully operational, except for operations specifically exempt from Regulation 8, Rule 44. The vapor recovery system shall be maintained to be leak free, gas tight, and in good working order. For the purposes of this condition, "fully operational" shall mean the system is achieving the reductions required by Condition No. 2 above. [Basis: Cumulative Increase]
7. The minimum incinerator temperature of A-41 shall be at least 1400°F. The vapor recovery system is not "fully operational" at any lower temperature. This minimum temperature may be adjusted by the District if source test data demonstrate that an alternate temperature is necessary for or capable of maintaining compliance with Condition No. 2 above. [Basis: Reg. 2-1-403]

The facility may conduct a source test for the purpose of lowering the minimum temperature

VI. Permit Conditions

requirement provided that the following has occurred:

- a. The facility has applied to the Permit Services Division for a change of conditions.
 - b. The Source Test Section was notified at least seven days prior to testing and the test protocol was deemed acceptable.
 - c. The results of the test demonstrate that A-41 is capable of meeting the emission factor limits imposed in Condition No. 2 for POC at the lower operating temperature. [Basis: Reg. 2-1-403]
8. A leak test shall be conducted on all vessels loading under positive pressure prior to loading more than 20% of the cargo. The leak test is not intended to impede the loading of a gas-tight tank vessel. The leak test shall include all vessel relief valves, hatch covers, gauging connections, and vapor recovery hose connections. Leak test results shall be included in the quarterly reporting already required of the Permit Holder. [Basis: Reg. 8-44]
 9. Permit Holder shall not exceed a loading pressure greater than 80% of the lowest relief valve set pressure, including vessel relief valves, while loading a controlled marine vessel. [Basis: Cumulative Increase]
 10. All maintenance records required for the vapor recovery system at this facility, which are subject to Regulation 8, Rule 44, shall be kept on site for five years and made available to the District upon request. [Basis: Recordkeeping]

V. SHORESIDE VAPOR RECOVERY UNITS (A-42 & 43) Removed due to expired A/C.

VI. TANKAGE (S-1 & 2) Removed due to expired A/C.

- the start up/commissioning period as specified in condition #5. [Basis: BACT]
3. S-73 CO concentrations shall not exceed 50 ppmv @ 3% O₂ as determined using District Source Test Method 6. [Basis: BACT]
 4. S-73 shall be fired exclusively on natural gas except for times of force major natural gas curtailment as defined in Regulation 9-11-208. NO_x emissions from S-73 shall not exceed 60 ppmv @ 3% O₂ when firing on diesel as determined using District Source Test Method 13 A or B. [Basis: BACT]
 5. The owner/operator shall conduct a District approved source test annually thereafter in order to determine compliance with condition numbers 2, 3, Regulation 9-7-301.1 and Regulation 9-7-301.2. All source testing shall be performed in accordance with the District's Manual of Procedures. The facility shall receive approval from the District's Source Test Manager for installation of test ports and source testing procedures. The results shall be delivered to the District no later than 30 days from the date of the source test. [Basis: Reg. 9-7]
 6. The owner/operator shall use a non-resettable natural gas flow meter in order to demonstrate compliance with condition #1. Natural gas and diesel fuel usage shall be recorded in a District approved monthly log and retained for at least 5 years from the date of entry. This log shall be kept on site and made available to District staff upon request. [Basis: Record Keeping]
 7. Within 1 month of issuance of the Title V Permit, the permit holder shall analyze a sample of distillate oil in the fuel oil tank for sulfur content to ensure compliance with Regulation 9-1-304. The sample shall be analyzed using District Method 10, Determination of Sulfur in Fuel Oils. The results of the analysis shall be sent to the Director of Enforcement and compliance at the District. All subsequent shipments of fuel oil to the facility shall have a vendor certification of the sulfur content of the fuel. [Basis: 2-6-409.2]

VII. APPLICABLE LIMITS & COMPLIANCE MONITORING REQUIREMENTS

This section has been included only to summarize the applicable emission limits contained in Section IV, Source-Specific Applicable Requirements, of this permit. The following tables show the relationship between each emission limit and the associated compliance monitoring provisions, if any. The monitoring frequency indicates whether periodic (P) or continuous (C) monitoring is required. For periodic monitoring, the frequency of the monitoring has also been shown, either annual (A), quarterly (Q), monthly (M), weekly (W), daily (D), or on an event basis (E). No monitoring (N) has been required if the current applicable rule or regulation does not require monitoring, and the operation is unlikely to deviate from the applicable emission limit based upon the nature of the operation.

IX. GLOSSARY

BAAQMD

Bay Area Air Quality Management District

BACT

Best Available Control Technology

CAA

The federal Clean Air Act

CAAQS

California Ambient Air Quality Standards

CEQA

California Environmental Quality Act

CFR

The Code of Federal Regulations. 40 CFR contains the implementing regulations for federal environmental statutes such as the Clean Air Act. Parts 50-99 of 40 CFR contain the requirements for air pollution programs.

CO

Carbon Monoxide

Cumulative Increase

The sum of permitted emissions from each new or modified source since a specified date pursuant to BAAQMD Rule 2-1-403, Permit Conditions (as amended by the District Board on 7/17/91) and SIP Rule 2-1-403, Permit Conditions (as approved by EPA on 6/23/95). Used to determine whether threshold-based requirements are triggered.

District

The Bay Area Air Quality Management District

EPA

The federal Environmental Protection Agency.

Excluded

Not subject to any District Regulations.

Federally Enforceable, FE

All limitations and conditions which are enforceable by the Administrator of the EPA including those requirements developed pursuant to 40 CFR Part 51, subpart I (NSR), Part 52.21 (PSD), Part 60, (NSPS), Part 61, (NESHAPs), Part 63 (HAP), and Part 72 (Permits Regulation, Acid Rain), and also including limitations and conditions contained in operating permits issued under

IX. Glossary

an EPA-approved program that has been incorporated into the SIP.

HAP

Hazardous Air Pollutant. Any pollutant listed pursuant to Section 112(b) of the Act. Also refers to the program mandated by Title I, Section 112, of the Act and implemented by both 40 CFR Part 63, and District Regulation 2, Rule 5.

Major Facility

A facility with potential emissions of regulated air pollutants greater than or equal to 100 tons per year, greater than or equal to 10 tons per year of any single hazardous air pollutant, and/or greater than or equal to 25 tons per year of any combination of hazardous air pollutants, or such lesser quantity as determined by the EPA administrator.

MFR

Major Facility Review. The District's term for the federal operating permit program mandated by Title V of the Act and implemented by District Regulation 2, Rule 6.

MOP

The District's Manual of Procedures.

NAAQS

National Ambient Air Quality Standards

NESHAPs

National Emission Standards for Hazardous Air Pollutants. Contained in 40 CFR Part 61.

NMHC

Non-methane Hydrocarbons

NO_x

Oxides of nitrogen.

NSPS

Standards of Performance for New Stationary Sources. Federal standards for emissions from new stationary sources. Mandated by Title I, Section 111 of the Act, and implemented by both 40 CFR Part 60 and District Regulation 10.

NSR

New Source Review. A federal program for pre-construction review and permitting of new and modified sources of air pollutants for which the District is classified "non-attainment". Mandated by Title I of the Clean Air Act and implemented by 40 CFR Parts 51 and 52 as well as District Regulation 2, Rule 2. (Note: There are additional NSR requirements mandated by the California Clean Air Act.)

IX. Glossary

Offset Requirement

A New Source Review requirement to provide federally enforceable emission offsets at a specified ratio for the emissions from a new or modified source and any pre-existing cumulative increase minus any onsite contemporaneous emission reduction credits. Applies to emissions of POC, NO_x, PM₁₀, and SO₂.

Phase II Acid Rain Facility

A facility that generates electricity for sale through fossil-fuel combustion and by virtue of certain other characteristics (defined in Regulation 2, Rule 6) is subject to Titles IV and V of the Clean Air Act.

POC

Precursor Organic Compounds

PM

Total Particulate Matter

PM₁₀

Particulate matter with aerodynamic equivalent diameter of less than or equal to 10 microns

PSD

Prevention of Significant Deterioration. A federal program for permitting new and modified sources of air pollutants for which the District is classified "attainment" of the National Air Ambient Quality Standards. Mandated by Title I of the Act and implemented by both 40 CFR Part 52 and District Regulation 2, Rule 2.

SIP

State Implementation Plan. State and District programs and regulations approved by EPA and developed in order to attain the National Air Ambient Quality Standards. Mandated by Title I of the Act.

SO₂

Sulfur dioxide

Title V

Title V of the federal Clean Air Act. Requires a federally enforceable operating permit program for major and certain other facilities.

TSP

Total Suspended Particulate

IX. Glossary

VOC

Volatile Organic Compounds
